

### **YouTube Shooting, San Bruno, California**

On Tuesday, April 3, 2018, Nasim Najafi Aghdam, 39, of San Diego, opened fire on the YouTube campus in San Bruno, California with a 9 mm semiautomatic handgun. She wounded three people before taking her own life as police arrived.

***YouTube Headquarters, San Bruno, California***

One of the wounded women made her way just down the road to Carl's Jr., restaurant and was helped by workers after she stopped in a booth by the door. She had a bullet wound to her leg. Michael Finney, a worker at Carl's Jr., made a bungee cord into a tourniquet and helped the woman until she was taken to a hospital. He and fellow workers initially tried using the woman's sweatshirt and rubber bands to form a tourniquet before they succeeded with the green bungee cord Finney brought from his office.

As we have seen time and time again, it's the people in the midst of the crisis who are always the **"help before help arrives."** They will use the skills they have and improvise what they need to stop the bleeding and provide the level of care they are capable of.

PLS has provided trauma kits, public access bleeding control stations and the requisite training to banks, college campuses, public schools, law enforcement, religious institutions and other businesses. These institutions have chosen to equip themselves with the trauma products and education that will provide for the immediate assistance needed, rather than rely on improvisation.

Isn't it time you make the investment to safeguard those in your school, workplace and congregation? Below are the products we offer along with a comprehensive training program uniquely designed for your needs. Please visit our website at [www.lifesaving.company](http://www.lifesaving.company) or call (512) 820-4554 to find out how we can help you.

### Our Products

The image displays a variety of trauma-related products. On the left, there is a white square box labeled 'Bleeding Control Station' with a red 'TK' logo. Next to it is an open white box containing a black 'Bleeding Control Station with Go-Bags'. To the right is a black 'Individual Go-Bag' with a red 'TK' logo. Below these are three 'IFAK' (Individual First Aid Kit) options: a closed black bag, an open bag showing its contents, and a black bag with an orange 'Visor Clip' attached. On the far right, a yellow background features a white 'Individual Trauma Kit' bag and a list of its contents.
